ANNUAL REPORT

OF THE

COMMISSIONER OF PATENTS

FOR

THE YEAR 1886.

WASHINGTON:
GOVERNMENT PRINTING OFFICE.
1887.

ANNUAL REPORT
OF THE
COMMISSIONER OF PATENTS
TO CONGRESS,
FOR THE YEAR ENDING DECEMBER 31, 1886.

Laid before the House of Representatives by the Speaker, February 5, 1887, referred to the Committee on Patents, and ordered to be printed.

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, January 31, 1887.

To the Senate and House of Representatives of the United States of America in Congress assembled:

The Commissioner of Patents is required by statute to "lay before Congress" during the month of January in each year an Annual Report, which shall contain detailed statements of all moneys received, of all expenditures for contingent and miscellaneous expenses, a list of all patents granted or extended during the year, and of all patentees, with their places of residence, and, finally, such other information as to the condition of the Patent Office as may be useful to Congress or the public.

The respective lists above mentioned, which are very voluminous, are furnished herewith in the usual way, and incorporated herein will be found the detailed statements referred to. At the outset, however, I desire briefly to call attention to a few subjects, which seems to be permissible under the last provision of the statute above mentioned.

ROOM.

In the last Annual Report of my immediate predecessor the attention of Congress was called particularly to the "utter inadequacy of room and facilities for conducting the business of the Patent Office." In my own last Annual Report attention was again directed to the situation. No provision has been made for our relief in this particular, and the same difficulties which were pointed out at length in each of such reports still exist.

OFFICIAL GAZETTE.

In 1872 a statute was enacted fixing the subscription price of the OFFICIAL GAZETTE at five dollars per annum, and under which statute copies are sent to various public libraries without charge. At that time, fifteen years ago, this publication was less than one-half its present size, and probably worth less than half its present value. I desire to invite the attention of Congress to the subject of increasing such subscription price.

In my last Annual Report I called attention to the fact that there was not and never had been any provision of law by which this Office was able to secure the reports of court decisions. I respectfully again call attention to this matter.

PHOTOLITHOGRAPHY.

The best and cheapest method of preparing the OFFICIAL GAZETTE as well as "producing copies of drawings of the weekly issues of patents, * * * copies of designs, trade-marks, and pending applications, and for the reproduction of exhausted copies," as provided by the statute, is accomplished by the art of photolithography. In the publication of the OFFICIAL GAZETTE and in the reproductions above mentioned there is expended annually on behalf of this Office about one hundred and thirty thousand dollars, (\$130,000.) Under the present law annual contracts are made for the execution of this work.

Under the practice which now obtains in this Office, on Friday morning of each week preparations are begun for the patenting of all applications which have been allowed and in which the final government fee has been paid during the week next preceding. To secure a proper reproduction of such cases, it is necessary that the original drawings be transmitted to the office where the work of photolithographing is performed. On each Friday morning the drawings which are ready are sent to the photolithographer, where the proof-sheets are prepared. At noon of the same day these are returned to this Office and another lot of drawings taken. About four o'clock of the same day proof-sheets of these last-mentioned drawings are returned, and other drawings again taken; and so this work of photolithographing continues day by day. Upon the return of the proof-sheets to this Office careful comparison with the original drawings must be made by the employes here, and imperfect sheets (which amount to about five per cent. of the whole) must be corrected and returned without delay.

From the fact that the *original* drawings must be sent to the photolithographer for reproduction, and when it is considered that these drawings constitute the only illustrated record in the Patent Office of the inventions involved—as under the present rules of the Office models are dispensed with—it is apparent that any loss or damage thereto would not only greatly embarrass the Office but result in serious injury to inventors. Doubtless, in view of these considerations, a requirement was inserted in the present contract that the original drawings and corrected proofs must be returned to the Patent Office within one and one-half

day from the delivery to the contractor of such original drawings.

It is not absolutely impracticable that the work of preparing the OFFICIAL GAZETTE be performed elsewhere than in this city, provided the place be not too remote. This undoubtedly would be attended at times with serious inconvenience. For manifest reasons, however, the work of preparing the current issues of patents must be done in this city, and the proper reproduction elsewhere is simply impracticable, if not impossible. Inasmuch as proof-sheets of the photolithographs of the current issues are used in the preparation of the OFFICIAL GAZETTE, it need hardly be said that this work *entire* can probably be more cheaply performed by one firm than by several independent firms or contractors.

I have no doubt that all this work should and will in time be done by the Patent Office itself. It should not be dependent upon contractors. When the patent system is revised, corrected, and improved, as it probably should and doubtless will be in the not distant future, this important subject will be at least carefully considered.

LABORATORY.

I again call attention to the fact that provision ought to be made for the proper testing of apparatus relating to inventions pertaining to electricity. I have several times been requested to and have permitted the examiner in charge of the electrical division to go a long distance to witness electrical experiments which could not, for want of room and facilities, be attempted here.

EMPLOYÉS.

At the first session of the present Congress I had occasion to call attention to the fact that an increase of force was imperatively needed in this Office. I am much gratified to be able to state that after the submission of my report I was able to more carefully consider this question and to explain orally to the Committee on Appropriations of the House of Representatives our absolute needs. It is sufficient to say that substantially all the help which I then asked for was furnished, and I see no need of any additions to the force now employed. With the present number of employés and adequate room and facilities the work can be done, and well done.

SALARIES.

I do not desire to make any specific suggestion in regard to the question of salaries. It is, however, apparent to me that this subject needs a complete revision in this Office. The salaries of the employés are not adjusted as they should be. In my judgment, a proper adjustment can and should be made, which will result in great good to the Office and in no aggregate increase.

LEGISLATION.

I again call attention to the fact that section 4885 of the Revised Statutes, relating to the date which a patent shall bear; section 4887, in regard to its limitation; section 4898, relating to assignments of patents and the record thereof, and section 4936, relating to the reimbursement of persons who have, through mistake, paid money into the Treasury for fees accruing at this Office, should probably be respectively amended. My recollection is that during the first session of the present Congress bills were prepared providing for these re-

spective amendments, introduced, and referred to the Committee on Patents of the House of Representatives.

In my last annual report the following statement was made:

At the present time, in addition to his administrative duties, the Commissioner is called upon to hear all cases of appeal from the rejection of an application by the Examiners-in-Chief, as well as to finally hear and determine all interference cases which may be appealed to him. Aside from the burden which this imposes upon the head of this Office, there is a want of uniformity in the decisions which emanate from time to time from the respective Commissioners of Patents, which ought to be corrected. I know of no better way to correct this evil than the establishment of some tribunal, to consist of at least three judges, whose tenure of office shall be fixed, and to whom all appeals shall lie. I have no doubt that the establishment of such a tribunal with such jurisdiction would not only make it possible for the Commissioner to conduct a more successful administration of his Office, but would secure to inventors and to the public a much more intelligent and uniform exposition of the law of patents and of the important questions which now of necessity must be determined so hastily.

I again invite attention to this subject for the purpose of asserting that my experience of the year last past has not only confirmed me in the views which I then expressed, but has made much more manifest to me the necessity for some legislation of this character. A court of sufficient dignity and strength ought to be created, and such tribunal might very properly be invested with final jurisdiction in all matters pertaining to the patentability of an alleged invention, as well as all matters of interference between litigating applicants. Such a court with such a jurisdiction would not only result in leaving the Commissioner free to attend to the other pressing duties of his Office, but would inevitably relieve the federal courts of much of the litigation upon these subjects with which they are now burdened.

CONCLUSION.

At the date of my last report to the Congress of the United States the current business of one examining division of this Office was two hundred and eighty-eight days in arrears; that of another, two hundred and fifty-nine days; that of another, one hundred and eighty-two days; another, one hundred and sixty-eight days, and still three others more than one hundred days. I am glad to be able to state that at the present time but four divisions are in arrears one hundred days and upward, and the one furthest in arrears is about one hundred and fifty days.

It is undoubtedly well understood that the first legislation by Congress upon the subject of promoting "the progress of science and the useful arts by securing by legislation for limited times to authors and inventors the exclusive right to their inventions and discoveries" was in the act approved April 10, 1790. From that time until 1836 our patent system was substantially like the present system of England and most of the countries of Europe; that in this last-mentioned year a thorough and complete revision of the entire legislation upon this subject was had, and that on the 4th of July, 1836, a statute was approved which to-day remains upon the statute-books in nearly all its essential features absolutely unchanged.

In the year 1837 four hundred and thirty-six patents were issued, while during the fiscal year ending June 30 last the number of patents issued was twenty-five thousand six hundred and nineteen.

In the statute of 1836 provision was made for the employment of but six persons all told, aside from the Commissioner, and these six persons were paid an aggregate annual salary of six thousand eight hundred and fifty dollars. The revenues of the Office during

the year 1837 were less than thirty thousand dollars. At the present time nearly six hundred persons are employed in the Patent Office at an aggregate annual salary of about six hundred and fifty thousand dollars, and the revenues of the Office for the fiscal year last past reached the large sum of one million two hundred thousand dollars, and this important Bureau, which is so intimately connected with all the substantial prosperity of the country, has not only *not* been a pecuniary burden upon the Government, but, aside from paying expenses, has a surplus of more than three million dollars.

I feel so confident that changes and modifications, too numerous to be dwelt upon in detail or to be pointed out in this report, of a substantial character, which would materially affect the prosperity and usefulness of this Office entire, are imperatively needed, that I cannot refrain from concluding by again urging upon Congress the necessity of providing in some way, by commission or otherwise, for a complete and exhaustive revision of the entire legislation, and, probably, of the rules which affect this Office.

*A literal compliance with the provisions of the statute requiring "a detailed statement of all expenditures for contingent and miscellaneous expenses" is not possible, for the reason that the contingent fund for the several bureaus of this Department was consolidated by the act of March 3, 1883, and hence no part of that fund is disbursed by the Patent Office, and I am furnished only with an approximate sum, supposed to have been so expended on behalf of the Patent Office.
